Muneeb Hyder

(647) 762 9037 | muneeb.hyder@mail.utoronto.ca | github.com/hyneeb

Skills

- Languages: Python • C • C++ • Java • Kotlin • TypeScript • SQL • Bash • Dart
- Technologies: React • Next.js • Flask • PostgreSQL • Prisma • Flutter • Docker
- Infrastructure & Concepts: Linux • Git • CI/CD • AWS • Networking • Distributed Systems

Experience

Software Engineering Intern May 2026 – Present

Federal Government of Canada – National Radar Program

- Designed and developed internal tooling to digitize maintenance tracking for Canada's radar network, implementing structured PostgreSQL-backed data storage and **real-time audit trails**, mitigating issues before outages occurred and reducing SEV1/SEV2 incidents by **45%.**
- Built a service monitoring dashboard and **AI remediation bots** that auto-resolve common issues from runbooks, cutting on-call workload by **20%.**

Software Engineering Intern Jan. 2026 – Apr. 2026

Live AI

- Led the development of an on-device speech recognition SDK with voice activity detection and speaker identification, achieving **98% accuracy in voice detection** and enabling robust offline speech processing for Live AI Android clients.
- Built an Android wake-word detection library, achieving **sub-128ms** prediction latency on flagship devices.
- Redesigned the audio processing pipeline for an on-device voice assistant, reducing battery usage by **25%** and enabling **near-zero CPU utilization** in idle mode through optimized processing and wake-state management.

Software Engineering Intern Sept. 2025 – Dec. 2025

Bellwoods Capital

- Designed a habit-formation system in React Native and Django, increasing **workout consistency by 40%**.
- Increased average session time by **25%** by integrating an AI-powered virtual coach that delivers tailored exercise plans.
- Built a scalable moderation pipeline that cut admin review time by **50%** while enabling **2× content throughput**.

Full Stack Engineering Intern Sept. 2025 – Dec. 2025

Investi

- Led end-to-end development of a Flutter financial education app used by **500+ active users**, shipping core learning modules and onboarding flows.
- Optimized Firestore queries and offline caching, reducing module load times by **40%**.
- Resolved UI performance bottlenecks via Dart DevTools, maintaining **60 FPS** across low-end devices.

Projects

Custom Unix Shell | *C • Unix • Sockets* Dec. 2025

- Implemented a Unix-like shell from scratch with job control, background execution, signal handling, and process management.
- Added TCP-based multi-client chat commands with message routing and user IDs.

ML Painting Classifier | *Python • NumPy • scikit-learn • Machine Learning* Apr. 2026

- Built a multiclass classifier predicting user painting preference, reaching **87.6% accuracy** on held-out data.
- Engineered features from mixed survey inputs, combining text vectorization and categorical encoding to feed the model.
- Evaluated multiple modeling approaches and selected the best-performing one through iterative tuning.

Education

University of Toronto Sept. 2023 – Present

Honours Bachelor of Science (HBSc), Computer Science Specialist

- Relevant Coursework: Operating Systems, Computer Networks, Algorithm Design & Analysis, Cybersecurity
